

### **I really like PowerRich for the following reasons:**

1. The amount of product to handle is greatly reduced, saving time at seeding by filling less and driving more. This is a big advantage as I work alone at seeding time.
2. The product is safe and easy to handle. There is very little caking in the bin on overwinter storage. The product also holds up very well to handling.
3. Salt indexes are lowered which is good for soil health.
4. It is very safe applied together with the seed.
5. In 2 years of use I have seen yields up to 69 bushels/acre on canola, 65 bushels/acre (64 lbs/acre) on HRSW with protein levels from 12-14.1, and milling oats yields up to 160 bushels/acre (45 lbs/acre).

I have used in depth soil testing for 10 years now. We (myself and an agronomist) are monitoring soil tests and see no reason why I cannot continue to use PowerRich fertilizer.

**Roger Schultz, Hague, SK**

### **This is my first year in using the PowerRich Fertilizer.**

I used the fertilizer on some of my wheat and soybean crop. I know that during the course of the summer, I could really tell where the PowerRich fertilizer was put down on my soybeans. They looked healthier, taller, and had a more uniform stand where the fertilizer was used.

Also on my wheat crop I gained about another ten bushel by using the PowerRich product on my wheat crop vs. just using the normal 11-52-0 fertilizer blend.

**Roger, Gadberry Farms, Grandin, N.D.**

### **From the wheat grown from the PowerRich program we were awarded the No. 1 Aggregate prize at the Lethbridge [Alberta] Agribition.**

**Darrell McElroy, McElroy Seed Farm**

### **My brother and I have been using PowerRich fertilizer on every acre we farm since 2004 with great results.**

We fill up with fertilizer first thing in the morning and don't have to refill until the next day. The time that we save with the reduced amount of PowerRich fertilizer required in the soil, translates into more time seeding and more money in our pockets.

**Doug Parker, St. Benedict, Sk, near Wakaw.**

### **I have used PowerRich products for the past 3 years and will continue to use it into the future.**

We have some fields that have as many as 8 different soil types. You could easily see the different zones in the crops. We added power rich and those differences have become less noticeable every year. Crops are more even and yields have improved dramatically on those fields as well as crop grade.
